encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide CC of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and C c.N.S disorders. Note: The sequence data for this patent did not form CR part of the printed specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             129
```

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence'3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13638 and AAH13631 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 318 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ŏ

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB seq

                                                                                                                                       FUNCTION: May play a critical role in death receptor-induced apoptosis and may target CASP8 and CASP10 to the nucleus. May regulate degradation of intermediate filaments during apoptosis. May play a role in the general transcription machinery in the nucleus and might be an important regulator of the activity of

This SWISS-PROT entry is copyright. It is produced between the Swiss Institute of Bioinformatics and the European Bioinformatics Institute. There are found in liver, kidney, heart, ovary, spleen, tesses, source, found in liver, kidney, heart, ovary, spleen, tesses, source, found in liver, kidney, heart or low in colon and small intestine. Expression is relatively high in the tumor cell lines chronic myologenous leukemia K-562 and the colorectal adenocarcinoma SW480. Expression is moderate in the cervical carcinoma Hela, the Burkitt's lymphoma Raji, the lung carcinoma A549, and the melonoma G361. In contrast, two leukemia cell lines, HL-60 (promyelocytic leukemia) and MOLT-4 (lymphoblastic leukemia), show relatively low levels.

                                                                                                                                                                                           IsoId=080ZV0-2; Sequence=VSP_010313, VSP_010314;
Note=No experimental confirmation available;
TISSUE SPECIFICITY: Expression is high in liver, heart, and testis but low in brain, spleen, lung, and skeleton DOMAIN: Interactions with CASPB and CASP10 are mediated domain (By similarity).
SIMILARITY: Contains 1 death effector (DED) domain.

Oncogene 22:291-297(2003).
-!- FUNCTION: A scaffold protein that directs CASP3 to certain
substrates and facilitates their ordered degradation during
apoptosis. May also play a role in mediating CASP3 cleavage of
KRT18. Regulates degradation of intermediate filaments during
apoptosis. May play a role in the general transcription machin
                                                                                                                                                                                                                                                                                                                                                                                                                                             Cohen G.M., Peter M.E.; orey A.H., Oshima R.G., Ding "DEDD regulates degradation of intermediate filaments apoptosis.";

Inhibits DNA transcription in vitro (By similarity). SUBUNIT: Interacts with CASPB, CASP10, KRTB, KRT1B, CASP3 and FADD. Homodimerizes and heterodimerizes with DEDD2. SUBCELULAR LOCATION: Cytoplasmic. Translocated to the nucleus during CD95-mediated apoptosis where it is localized in the nucleoli (By similarity). Following apoptosis induction, the mono and/or diubiquitination form increases and forms filamentous structures that colocalize with KRTB and KRT18 intermediate filament network in simple epithelial cells.

Endocrinology 139:4839-4848 (1998).
-I-FUNCTION: A scaffold protein that directs CASP3 to certain substrates and facilitates their ordered degradation during apoptosis. May also play a role in mediating CASP3 cleavage of KRT18. Regulates degradation of intermediate filaments during apoptosis. May play a role in the general transcription machinery in the nucleus and might be an important regulator of the activity of GTP3C3. Inhibits DNA transcription in vitro (By similarity).
-I- SUBUNIT: Interacts with CASP8, CASP10, KRT18, CASP3 and FAADD. Homodimerizes and heterodimerizes with DEDD2 (By

PTM: Exists predominantly in a mono- or diubiquitinated SIMILARITY: Contains 1 death effector (DED) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    that colocalize with KRT8 and KRT18 intermediate filament network in simple epithelial cells (By similarity).
TISSUE SPECIFICITY: Widely expressed with highest levels in testis. Within the testis, highly expressed in germ cells but not expressed in Sertoli cells.
DEVELOPMENTAL STAGE: First detected in 20-day-old animals. Reaches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         similarity).

SUBCELLULAR LOCATION: Cytoplasmic. Translocated to the nucleus during CD95-mediated apoptosis where it is localized in the nucleoli. Following apoptosis induction, the mono and/or diubiquitination form increases and forms filamentous structures
                                                                                                                                                                                                                                                                                                        Scores:

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: A scaffold protein that directs CASP3 to certain substrates and facilitates their ordered degradation during apoptosis. May also play a role in mediating CASP3 cleavage of KRT18. Regulates degradation of intermediate filaments during apoptosis. May play a role in the general transcription machinery in the nucleus and might be an important regulator of the activity of GTF3C3 (By similarity). Inhibits DNA transcription in vitro.

-!- SUBUNIT: Interacts with CASP8, CASP10, KRT18, KRT18, CASP3 and FADD. Homodimerizes and heterodimerizes with DEDD2 (By similarity).

-!- SUBCELLULAR LOCATION: Cytoplasmic. Translocated to the nucleus during CD95-mediated apoptosis induction, the mono and/or diubiquitination form increases and forms filamentous structures that colocalize with KRT8 and KRT18 intermediate filament network in simple epithelial cells (By similarity).

-!- TISSUE SPECIFICITY: Ubiquitously expressed.

-!- SIMILARITY: Contains 1 death effector (DED) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWI

FUNCTION: This IE protein is a multifunctional protein capa migrating to the nucleus, binding to own synthesis. viral genes, and autoregulating its own synthesis. SUBCELLULAR LOCATION: Nucleus of infected cells. PTM: A long stretch of serine residues may be a major site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            phosphorylation.
SIMILARITY: Belongs to the herpesviruses ICP4/IE140/IE180 family.

EHLF1 protein - human herpesvirus 4 (strain B95-8)

C;Species: human herpesvirus 4, Epstein-Barr virus

C;Date: 25-Feb-1985 #sequence_revision 25-Feb-1985

C;Baccession: A03742

R;Bankier, A.T.; Deininger, P.L.; Farrell, P.J.; Ba
R;Bankier, A.T.; Deininger, P.L.; Farrell, P.J.; Barrell, Mol. Biol. Med. 1, 21-45, 1931
A;Title: Sequence analysis of the 17,166 bp BcoRI fragment A;Reference number: A93065; MUID:85035713; PMID:6092825
                                                                                                                                                                                                                                                                                                                                                                                                중 유
